LIMITED TO 1,000 BIKES

The heart of an EV, the soul of moto.

The Ryvid Anthem is a completely fresh take on two-wheeled EV mobility. Proprietary technology includes a bespoke, lightweight stainless-steel chassis, Ergo-Easy adjustable ride height, and a removable battery pack for easy charging. The Anthem's groundbreaking tech is cloaked beneath minimal, sleek bodywork. A premium product at an accessible price point, our launch bike blazes the trail for a lineup that will transform how the world rides.

Anthem Features

Ergo-Easy

Ride Height-Adjustable Seat

Many riders have ergonomic issues keeping them from a perfect fit with the bike. Ryvid offers an innovative solution: a seat height that's adjustable, ranging from 30 to 34 inches. This proprietary technology brings confidence-inspiring reach to shorter riders and comfort to those of taller stature.

See into your Future

Fullscreen High-Viz Display

(TFT: Liquid Crystal Transistor)

Clear, contrasty, and visible in bright sunlight, our 4.9-inch TFT display screen is designed for ultimate clarity and efficiency, making key information like speed and state of charge legible at a glance.

Consistent Quickness

Rear drive assembly with integrated motor and variable-ratio, final drive.

Packaging the motor at the rear simplifies design and reduces parts, while a variable-ratio, final drive offers a choice between quicker around-town acceleration or high-speed cruising comfort.

Less is Fast

Ultra-lightweight / Low center of gravity

The two most critical factors in a bike's handling are weight and center of gravity. Ryvid utilizes a proprietary stainless-steel chassis weighing as little as 12 pounds, bringing total mass closer to that of an e-bicycle than an EV motorcycle. By distributing that weight closer to the ground, our bikes are nimble, easy to manage, and ultra-responsive.

Recharge your ride

Removable battery pack

Ryvid's easily removable 4.3 kWh battery can be quick-swapped for instant fill-ups or brought indoors for ultimate charging flexibility.

Ride, Recharge, Renew

Throw a leg over our Anthem and it hits you: this is no ordinary EV. From the Ergo-Easy, ride height-adjustable seat to the vivid, 4.9-inch TFT display screen, this bike feels like it was built around you. Whip away from a standstill and it comes alive, zipping through space with ease. This. Thing. Rips. The feeling comes from the instant thrust of the electric motor and a variable-ratio, final drive that transforms electrons into speed with whip-snap ease. The bike corners intuitively and cleanly, thanks to a low center of gravity, leaning in with confidence-inspiring grip. Best of all the Anthem's athleticism feels potent but discreet. Thanks to its whispery operation, all you hear is the whir of the belt drive and the pounding of your heart. The thrill of EV riding has been amped up: are you in?

Specifications

- Range
75+ miles (Eco Mode)
50+ miles (Sport Mode, sans Regenerative Braking)
- Speed
75+ mph (120 km/h)
- Power System
4.3 kWh Lithium Ion Battery
- Peak Torque
53 ft-lb (72 N-m)
At Wheel: 250 ft-lb (338 N-m) @ 4.7 gear ratio
- Drive Train
Transmission: Clutchless Direct Drive
- Final Drive
117T/25T Poly Chain and HTD carbon belt
4.7 gear ratio
